

	what the dataset provides					research plan				priority	
	genomic DNA	5' UTR	CDS	3' UTR	protein	protein held constant	multiple species	tissues or cell types	in hand		
mRNA stability (CodonBERT / Diez 2022)										1	same coding sequence
mRFP synonymous variants (CodonBERT)										5, parallel	
Fungal expression (Wint 2022)										1	
E. coli expression (Ding 2022)										1	
Ab1 antibody mRNA expression (Yazdani)										1, added	
CoV-Vac mRNA degradation (Leppek 2022)										1, added	
GTEx isoform expression (IsoFormer)										2	distinct molecules
mRNA half-life, Saluki (mRNABench)										3	
LBKWK synthetic mRNA: half-life and MRL										3, 4, added	
Translation efficiency (mRNABench)										4	
Mean ribosome load, Sugimoto (mRNABench)										4, added	
COMET multi-molecule: RPI, EPI, CRISPR off-target										listed	
Protein-to-mRNA ratio (Eraslan)										listed	codon vs amino acid
CaLM suite: abundance, Tm, solubility											
COMET cross-molecule CDS/protein: Flu, EC, Beta-Lac											
mRNABench: GO, localization, RBP, UTRs											
5' UTR ribosome load (MRL MPRA)										single region, no protein	
3' UTR polyadenylation (APA)											
Enhancer perturbation (CDT)											regulatory DNA

filled: available hatched: partly (see text) grey: not available listed: from the October paper list
